TIME CRITICAL MANUFACTURING

TCM eNews

Excess Stock

Over our 21 year history TCM has bought stock covering once common stock lines or MOQ's across several alternate customer products. This has over time built up stock levels where as customer revisions change and parts are engineered out, this leaves stock with no later usage.

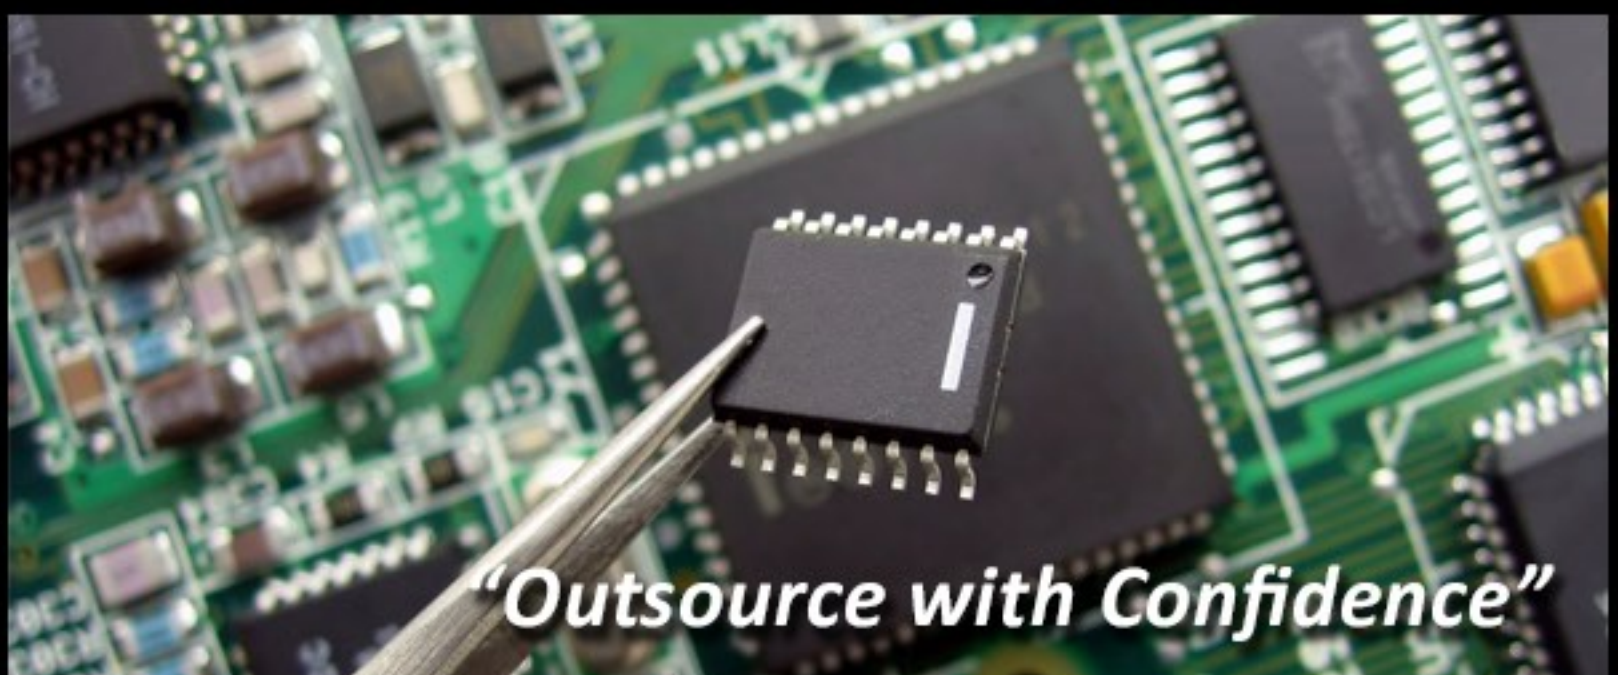

Where TCM is able to still provide a service for these legacy assemblies or items with hard to find components means instead of going to the grey market you can come right to the source of who previously manufactured those products. This list allows all of those parts that are no longer in demand can be openly viewed by both our customers and suppliers. All stock is held on site and can ship within 24 hours of an order being placed.

By simply clicking on the below link, this will automatically take you through our company drop box location to the full list of parts.

<http://db.tt/R4dwsgKo>

If you find a specific item and are not confident which assembly it relates to, we can trace back through our data base to reaffirm the exact Assemblies/BOM's it was manufactured in.

If there are any parts you find that are of interest, please contact us sales@tcmelectronics.com.au where we can provide any additional information along with associated costs. At a minimum there will be a freight cost for all parts supplied.

TCM Electronics is a trading name of Procurement Management Services Pty Ltd.
